## **CASE STUDY: CHICHESTER PARK HOTEL**

### **Chichester Park Hotel welcomes a greener future**

The Chichester Park Hotel has taken significant steps towards a greener future with Energy Saving Help.

This popular 3\* hotel offers 77 ensuite bedrooms, a fine bar, restaurant, conference facilities and leisure facilities and even a beauty suite. It sees a constant stream of visitors due to its prime location in the historic city of Chichester.

In 2013, the hotel owner, Dean Chahboune took the decision to install both Endocube, to improve the efficiency of the fridges and freezers, and Aquavantage, to treat limescale, in a move to become more environmentally friendly and reduce rising fuel costs.

The Endocube was fitted to 10 freezers and fridges including a walk-in unit. As well as bringing down energy consumption, there have been no engineer call-outs since the Endocube was installed, whereas before an engineer was regularly called out to deal with breakdowns.

The hotel has also reaped a number of benefits from fitting the Aquavantage Digital Electronic Scale Prevention System. Thanks to a significant reduction in scale, the hotel's Vapac units in the leisure complex now last several months longer, sanitary ware is much easier to clean and toilet blockages are a rare occurrence. Given that each mm of limescale increases energy consumption by 7% (Carbon Trust), this has been an important investment for the hotel.

The hotel is now exploring the Aquavantage system to treat the circulating water for its swimming pool and spa.
