

What some of EndoCube's clients say:

During the trial we fitted one unit to a walk-in cold room and one unit to an upright fridge. We monitored the kWh consumption for one week with the unit fitted and one week without and we found that we were showing a 9% reduction in electrical consumption week on week. Following the trial I have had 84 EndoCube devices fitted to various refrigeration units. Year on year savings on electrical consumption have been 18%. I would have no hesitation in recommending this product to any hotel as a cost effective way to reduce electrical consumption and also prolong the working life of their equipment.

Simon Pearson, Chief Engineer, Radisson SAS

When we first heard about the EndoCube, we wanted to test it as quickly as possible. We arranged for a large scale trial to be completed and once the results were in, we immediately implemented the EndoCube at the Riverbank Park Plaza. As a result of installing over 150 EndoCubes, we are saving approximately £17,000 per year on our electricity bill. Since the successful trial at Riverbank the EndoCube is being installed throughout the Park Plaza Hotels in the UK.

David Bell, Chief Engineer, Riverbank Park Plaza Hotel

The units have been installed on all the reach in and walk in refrigeration. Since installation, the amount of on and off cycles has fallen by 30%, which will no doubt improve the longevity of the condenser units. Energy savings have been measured at around 18-20%, depending on the individual units, and this has resulted in savings of over £1000 a year in total. I would not hesitate to recommend installation of these units to refrigerators and freezers in order to save electricity and wear on the equipment.

Andy Bunce, Group Engineer, Holiday Inn

We have had 23 EndoCube units installed on our refrigeration equipment throughout the hotel. Since being installed we have noted significant reductions in energy bills and have reported considerably less equipment failure. We are delighted with the EndoCubes' performance which has helped us reduce our carbon footprint and most importantly our operating costs. We would happily recommend this amazing technology to all industries utilising refrigeration equipment.

Mark Francis, Maintenance Manager, Ramada Plaza Gatwick
